Mini-Star Electric Boiler | Allied Engineering â€œ Super Hot

A boiler is a closed vessel in which fluid (generally water) is heated. The fluid does not necessarily boil. (In North America, the term "furnace" is normally used if the purpose is not to boil the fluid.[citation needed]) The heated or vaporized fluid exits the boiler for use in various processes or heating applications, including water heating, central heating, boiler-based power generation ...

Developed by The American Society of Power Engineers (ASOPEâ„¢)

Boiler design is the process of designing boilers used for various purposes. The main function of a boiler is to heat water to generate steam. Steam produced in a boiler can be used for a variety of purposes including space heating, sterilisation, drying, humidification and power generation.The temperature or condition of steam required for these applications is different, so boiler designs ...
