Basic Networking Tutorial - a network is any collection of independent computers that communicate with one another over a shared network medium. A computer network is a collection of two or more connected computers. When these computers are joined in a network, people can share files and peripherals such as modems, printers, tape backup drives, or CD-ROM drives.

Ping is a computer network administration software utility used to test the reachability of a host on an Internet Protocol (IP) network. It measures the round-trip time for messages sent from the originating host to a destination computer that are echoed back to the source. The name comes from active sonar terminology that sends a pulse of sound and listens for the echo to detect objects under ...

RELATED: Why Does Rebooting a Computer Fix So Many Problems? Your router is the same: every reason rebooting a computer can solve problems applies. Just like on your computer, you're not actually solving

whatever is causing the router to crash, but you are allowing it to run properly again.
