In passive solar building design, windows, walls, and floors are made to collect, store, reflect, and distribute solar energy in the form of heat in the winter and reject solar heat in the summer. This is called passive solar design because, unlike active solar heating systems, it does not involve the use of mechanical and electrical devices.. The key to design a passive solar building is to ...

GigEpack Ethernet Products. Advanced design techniques ensure reliable operation under extreme conditions while stripping away complexity and advancing ease-of-use, the GigEpack provides three key elements: Certified Products, free drivers and copy-ready evaluation boards, and Microchip's free LANCheck's design check service. Together, they ensure interoperability, rapid development and ...

Dozens of free design guides and plans for dozens of sunspaces and greenhouses you can build. Attached sunspaces can be a good way to solar heat your house, provide some additional living space, plant growing space, a place to read the newspaper and look at the views, and a place to hang the laundry for solar drying.
