General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics. General relativity generalizes special relativity and Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time ...

In general relativity, a geodesic generalizes the notion of a "straight line" to curved spacetime. Importantly, the world line of a particle free from all external, non-gravitational force, is a particular type of geodesic. In other words, a freely moving or falling particle always moves along a geodesic. In general relativity, gravity can be regarded as not a force but a consequence of a ...

Le tenseur d'Einstein est donc un tenseur qui, dans l'équation d'Einstein, représente la courbure et possède une signification physique, c'est-à-dire d'ordre 2, symétrique, possédant une dérivée covariante nulle, et qui permet de retrouver la loi de gravitation de Newton comme approximation ...

I've been trying to delve deeper into predictive processing theories of the brain, and I keep coming across Karl Friston's work on "free energy".. At first I felt bad for not understanding this. Then I realized I wasn't alone. There's an entire not-understanding-Karl-Friston internet fandom, complete with its own parody Twitter account and Markov blanket memes.
