Porosity or void fraction is a measure of the void (i.e. "empty") spaces in a material, and is a fraction of the volume of voids over the total volume, between 0 and 1, or as a percentage between 0% and 100%. Strictly speaking, some tests measure the "accessible void", the total amount of void space accessible from the surface (cf. closed-cell foam).

Using Eq. , the optimal canal cross section for minimum water loss for a specified value of  $m$ , can obtained. Once, the value of  $b$  and  $y_n$  are calculated, 4.2. Velocity-constraint. The minimum permissible velocity,  $V_{min}$  or the non-silting velocity is the lowest velocity that will not initiate sedimentation and will not induce the growth of vegetation. . Sedimentation and growth of vegetation ...

Ohm's law states that the current through a conductor between two points is directly proportional to the voltage across the two points. Introducing the constant of proportionality, the resistance, one arrives at the usual mathematical equation that describes this relationship:  $V = IR$ , where  $I$  is the current through the conductor in units of amperes,  $V$  is the voltage measured across the conductor in ...
