Breastfeeding and human milk are the normative standards for infant feeding and nutrition. Given the documented short- and long-term medical and neurodevelopmental advantages of breastfeeding, infant nutrition should be considered a public health issue and not only a lifestyle choice. The American Academy of Pediatrics reaffirms its recommendation of exclusive breastfeeding for about 6 months ...

Breastfeeding and the Use of Human Milk | From the

The AMS Dairy Program helps the U.S. dairy industry efficiently market high-quality milk and dairy products. It also ensures that U.S. consumers have access to a sufficient supply of these products at all times.

Dairy Program | Agricultural Marketing Service

Breast milk is the milk produced by the breasts (or mammary glands) of a human female to feed a child. Milk is the primary source of nutrition for newborns before they are able to eat and digest other foods; older infants and toddlers may continue to be breastfed, in combination with other foods from six months of age when solid foods should be introduced.

Breast milk - Wikipedia

Condensed milk is cow's milk from which water has been removed. It is most often found in the form of "sweetened condensed milk" ("SCM"), with sugar added, and the terms "condensed milk" and "sweetened condensed milk" are often used interchangeably today. Sweetened condensed milk is a very thick, sweet product, which when canned can last for years without refrigeration if not opened.

Condensed milk - Wikipedia
