Lecture 7 Duality - unisi.it

Duality in Linear Programming 4 In the preceding chapter on sensitivity analysis, we saw that the shadow-price interpretation of the optimal simplex multipliers is a very useful concept.

Duality in Linear Programming 4

encompassing a form of state-observable duality in quantum physics, and there- after improve upon his coalgebraic characterisation of quantum symmetries from our duality-theoretical perspective, in order to exhibit the meaning of duality.

From Operational Chu Duality to Coalgebraic Quantum Symmetry

In summary: The primal and Lagrangian dual may 1) have a duality gap; 2) have zero duality gap but the optimal solutions are not attainable; or 3) have zero duality gap and the optimal solutions are attainable.

Lagrangian Duality Theory - Stanford University

Chapter 4 Duality Given any linear program, there is another related linear program called the ... is called the primal. We now formulate the dual. ... cost in the dual is at least as large as the maximal profit in the primal. This fact is known as weak duality. Another result, referred to as strong duality, ...

Chapter 4 Duality - Stanford University

Weak Duality The following result shows that the objective value of any feasible solution to the dual problem constitutes a lower bound for the objective value of any feasible solution to the primal problem. Theorem (Weak Duality Theorem) Consider the primal problem P given by(1) and its Lagrangian dual problem D given by(2).

Lagrangian Duality - Newcastle

In mathematics, a duality, generally speaking, translates concepts, theorems or mathematical structures into other concepts, theorems or structures, in a one-to-one fashion, often (but not always) by means of an involution operation: if the dual of A is B , then the dual of B is A . Such involutions sometimes have fixed points, so that the dual of A is A itself.

Duality (mathematics) - Wikipedia

The primal-dual pair of LPs P and D are related via the Weak Duality Theorem. Theorem 4.1 (Weak Duality Theorem) If $x \in \mathbb{R}^n$ is feasible for P and $y \in \mathbb{R}^m$ is feasible for D , then $c^T x \leq y^T A x \leq b^T y$. Thus, if P is unbounded, then D is necessarily infeasible, and if D is unbounded, then P is necessarily infeasible.
